Think Spring

MAR. 18. 67

Spring Meeting March 18, 1967

Newington, Conn. R.T. 15 - C.L. & P. Building.

You all know where the impressive Conn. Light & Power building is located, towering on the hill top.

For Saturday, March 18, 1967, the meeting is called at 1:00 P. M. - Luncheon on your own.

Don't slave over a hot stove to-day. Have luncheon out, and stay for dinner at Monero's restaurant nearby.

Come to the meeting, get the feeling of Spring. The Program chairman, Louise Rice announces - "A Look At The Species".

L. philadelphicum

L. rubellum

L. grayi

Mrs. Rice, M. C., would like members to tell us of any unusual Species they have grown - how temperamental they are - and especially of members' experiences with them.

Do not exclude the more common kinds, they too can be temperamental.

L. hansonii

Please bring any slides in color that you may have. Of species.

A well known lily authority characterizes one of these species illustrated here as being the most primitive lily now in existence. Which well known species, (not illustrated here) has only one whorl of leaves?

How well do we read our lily literature? Which is the most primitive?

Home work assignment.

Read the December, 1966, N. A. L. S. Quarterly Bulletin, and be prepared.

RESERVED

For John Grant's article - Species

Membership in the New England Regional Lily Group is open to all residents of New England, - including New York State - and to N. A. L. S. members in other states and Countries. Dues are \$2.00 per calendar year, \$3.00 for couples.
